

Unit 3 - End of Unit Review Activity

AP Calc. AB

4 by 4 Group Review Activity

There are 4 problem sets in each corner of the room

We must divide the class into 4 equal groups

You and your group will solve the first problem of the problem set at your corner

Then after 5 minutes each group will rotate counterclockwise to the next corner and complete the second problem of the problem set

After another 5 minutes each group will rotate again counterclockwise and complete the third problem of the problem set

Finally after another 5 minutes each group will rotate again counterclockwise and complete the fourth problem of the problem set to finish up the work part of the activity

4 by 4 Group Review Activity

I will come around and take pictures of each problem set and project them onto the front board.

We as a class will double check our work and nicely “call each other out” if we made any mistakes along the way.

Partner Word Scramble Challenge

You and a partner or two partners depending on the size of the class will start with a notebook and pen/pencil at one of the 11 stations

You must solve the problem at the station and depending on the answer you get you will move to a different station matching the letter next to the answer you got

If you solve each correctly you and your partner will then decode the message to spell out a funny word!
